SUMMARY

Technical Lead and Founder with 4+ years of experience delivering scalable web applications and modernizing legacy systems. Proven track record in leading engineering teams, architecting high-traffic platforms, and integrating AI-driven solutions. Committed to solving real-world problems through robust backend architecture, REST API design, and strategic product development.

EXPERIENCE

Founder & Lead Engineer

2026 – Present

Sawari — Ride-Sharing and Carpooling Platform

- Architected and built the full backend from concept to launch — Laravel REST APIs, the commuter/ride-matching engine for a platform connecting commuters across Pakistan.
- Designed a scalable relational database and public, machine-readable APIs for AI chatbot and agent discovery, letting third-party assistants query rides and routes directly.
- Built the Android app backend and led branding, product strategy, and the technical roadmap. Now serving 1000+ users / 600+ rides across Karachi.

Technical Lead

2023 – Present

BTAB Group — Australia (Remote)

- Lead a team of developers building enterprise ERP and business platforms for Australian and international stakeholders and Marketplaces.
- Design backend architecture and REST APIs, manage deployments, and enforce quality through code reviews and engineering best practices.
- Mentor junior engineers and own technical decisions across concurrent client projects.

Senior Developer

2022 – 2023

Praetors Pvt Ltd

- Built multiple SaaS platforms from scratch in Laravel, PHP and React — authentication, role-based access control, dashboards, reporting, payment gateways, and notification systems.
- Designed backend architecture and normalized MySQL schemas optimized for performance; integrated multiple payment gateways and third-party APIs.

Frontend & WordPress Developer

2021 – 2022

SAS Digisol

- Built responsive business websites for local and international clients — theme customization, custom plugin development, and tailored CMS solutions.
- Improved front-end performance and SEO across client sites.

PROJECTS

DigiMart - Multi-role digital marketplace (buyer, seller, admin) with Stripe, Razorpay & PayPal checkout, seller payouts and KYC, product reviews, and a full role-based admin panel. Successfully handled 500+ daily transactions with automated KYC compliance, reducing manual verification overhead.

Laravel 11 · Tailwind · Alpine.js · MySQL · Spatie · github.com/asimnizam/digimart-marketplace

PishJoy Marketplace Modernization - Migrated a legacy CodeIgniter marketplace to a modular Laravel architecture; added Redis caching, Meilisearch search, and infinite-scroll product feeds. Integrated AI-based image validation to automate moderation of seller-uploaded listings, and AI-assisted ranking to optimize the search feed. Improved search query response time by 40% and reduced manual moderation workload by 60% through AI-driven automation.

Laravel · CodeIgniter · Redis · Meilisearch · Horizon

Laravel SaaS Platforms - Multiple SaaS products built from scratch: authentication, role-based access control, dashboards, reporting, and payment gateways. Deployed 5+ custom SaaS solutions, reducing development cycles by 30% through modular architecture.

Laravel · Core PHP · MySQL

SKILLS

Backend: PHP, Laravel, Core PHP, CodeIgniter, Node.js, Express.js, REST API design

AI: AI image validation & vision APIs, AI-assisted search ranking, LLM/agent-facing API design, AI-assisted development

Frontend: React, JavaScript, HTML5, CSS3, Bootstrap, jQuery

Data & Infra: MySQL, PostgreSQL, Redis, Meilisearch, Linux, Nginx, Composer, Laravel Horizon

Tooling: Git, GitHub, REST APIs, JSON

Integrations: Payment gateways, WhatsApp Business API, Google Maps, Firebase, OAuth, JWT

CMS: WordPress, Shopify, Wix

EDUCATION

B.Sc. in Computer Science

Iqra University

2020 – 2024
