

ASIM NIZAM

BACKEND ENGINEER • TECHNICAL LEAD & FOUNDER

Islamabad, Pakistan • +92 318 0315020 • asimnizam@icloud.com • asimjay.github.io/portfolio • linkedin.com/in/asim-nizam-77668995 • github.com/asimndev

SUMMARY

Backend engineer shipping production Laravel systems since 2021 — REST APIs, relational data models, and legacy modernization. Worked full-time as a developer throughout my Computer Science degree (2021–2024), moving from frontend and CMS work into backend architecture and team leadership. Now founder and lead engineer of Sawari, a ride-sharing platform, and Technical Lead at BTAB Group.

EXPERIENCE

Technical Lead 2023 – Present

BTAB Group — Australia (Remote)

- Lead a team of 2 engineers building enterprise ERP, business platforms, and marketplaces for Australian and international stakeholders.
- Design backend architecture and REST APIs, and manage deployments across concurrent client projects.
- Own engineering standards through code review and CI/CD pipelines; mentor junior engineers and own technical decisions.

Founder & Lead Engineer 2025 – Present

Sawari — Ride-Sharing and Carpooling Platform

- Architected and built the full stack from concept to launch — React front-end, PostgreSQL data layer, and serverless REST APIs powering the commuter/ride-matching engine.
- Designed the relational database and public, machine-readable APIs for AI chatbot and agent discovery, letting third-party assistants query rides and routes directly.
- Shipped the native Android app (Capacitor) with Firebase push notifications, and led branding and product strategy. Now serving 1000+ users and 600+ rides across Karachi.

Senior Developer 2022 – 2023

Praetors Pvt Ltd

- Built SaaS platforms from scratch in Laravel, PHP, and React — authentication, role-based access control, dashboards, reporting, payment gateways, and notification systems.
- Designed backend architecture and normalized MySQL schemas; integrated multiple payment gateways and third-party APIs.

Frontend & WordPress Developer 2021 – 2022

SAS Digisol

- Built responsive business websites for local and international clients — theme customization, custom plugin development, and tailored CMS solutions.
- Improved front-end performance and SEO across client sites.

PROJECTS

DigiMart — Multi-role Digital Marketplace

Buyer, seller, and admin roles with Stripe, Razorpay, and PayPal checkout, seller payouts, product reviews, and a role-based admin panel. Automated seller KYC so onboarding no longer depended on manual document review.

Laravel 11 • Tailwind • Alpine.js • MySQL • Spatie • github.com/asimndev/digimart-marketplace

PishJoy — Marketplace Modernization

Migrated a legacy CodeIgniter marketplace to a modular Laravel architecture; added Redis caching, Meilisearch search, and infinite-scroll product feeds. Integrated AI image validation to screen seller-uploaded listings automatically and AI-assisted ranking for the search feed, removing the need to moderate every upload by hand.

Laravel • CodeIgniter • Redis • Meilisearch • Horizon

SKILLS

BACKEND	PHP, Laravel, Core PHP, CodeIgniter, Node.js, Express.js, REST API design, PHPUnit, Pest
FRONTEND	React, JavaScript, HTML5, CSS3, Bootstrap, jQuery
DATA	MySQL, PostgreSQL, Redis, Meilisearch, Laravel Horizon, Composer
DEVOPS & CLOUD	Git, Docker, GitHub Actions, DigitalOcean, Linux, Nginx
AI	Vision API / image validation, AI-assisted search ranking, LLM & agent-facing API design
INTEGRATIONS	Payment gateways, WhatsApp Business API, Google Maps, Firebase, OAuth, JWT
CMS	WordPress, Shopify

EDUCATION

B.Sc. in Computer Science 2020 – 2024

Iqra University
